Introduction	xxv
--------------	-----

Part I **Gameplay Programming**

Chapter 1	A Chronology of Game Programming	1
	Phase I: Before Spacewar	1
	Phase II: Spacewar to Atari	5
	Phase III: Game Consoles and Personal Computers	8
	Game Consoles and Game Developers	8
	Personal Computers	11
	Phase IV: Shakedown and Consolidation	13
	Phase V: The Advent of the Game Engine	16
	Phase VI: The Handheld Revolution	22
	Phase VII: The Cellular Phenomenon	24
	Phase VIII: Multiplayer Games	25
	In Closing	27
Chapter 2	Game Architecture	29
	Real-Time Software	29
	Real-Time Loops	31
	The Game Logic Section	37
	Player Update	37
	World Update	39
	The Presentation Section	42
	World Rendering	43
	NPC Rendering	44
	The Player	45
	Caveat: Networked Games	47
	The Programming Process	48
	Stages	48
	In Closing	60

Chapter 3	Data Structures and Algorithms	61
	Types, Structures, and Classes	61
	Data Structures	64
	Static Arrays	64
	Linked Lists	67
	Doubly-Linked Lists	68
	Queues	69
	Stacks	70
	Deque	71
	Tables	72
	Trees	77
	Priority Queues	84
	Graphs	85
	The Standard Template Library	88
	Containers	90
	Iterators	95
	In Closing	96
Chapter 4	Design Patterns	97
	Design Patterns Defined	98
	Some Useful Programming Patterns	99
	Singleton	99
	Strategy	100
	Factory	103
	Spatial Index	106
	Composite	111
	Flyweight	115
	Usability Patterns	117
	Shield	117
	State	118
	Automatic Mode Cancellation	118
	Magnetism	119
	Focus	119
	Progress	120
	In Closing	120
Chapter 5	User Input	121
	The Keyboard	121
	Keyboard with DirectInput	124

	Mouse	130
	Mouselook	132
	Joysticks	134
	Response Curves	138
	Hardware Abstraction	141
	Force Feedback	144
	In Closing	147
Chapter 6	Fundamental AI Technologies	149
	Context	150
	Structure of an AI System	151
	Sensing the World	152
	Memory	153
	Analysis/Reasoning Core	154
	Action/Output System	154
	Specific Technologies	155
	Finite State Machines	155
	Rule Systems	169
	Planning and Problem Solving	180
	Biology-Inspired AI	183
	In Closing	190
Chapter 7	Action-Oriented AI	191
	On Action Games	192
	Choreographed AIs	192
	Implementation	194
	Object Tracking	195
	Eye Contact: 2D Hemiplane Test	195
	3D Version: Semispaces	197
	Chasing	199
	Chase 2D: Constant Speed	199
	Predictive Chasing	200
	Evasion	203
	Patrolling	203
	Hiding and Taking Cover	204
	Shooting	206
	Infinite-Speed Targeting	206
	Real-World Targeting	207
	Machine Guns	209

	Putting It All Together	211
	Parallel Automata	211
	AI Synchronization	212
	In Closing	214
	Platform Games	214
	Shooters	216
	Fighting Games	217
	Racing Titles	218
Chapter 8	Tactical AI	219
	Tactical Thinking Explained	219
	Path Finding	221
	Group Dynamics	237
	Military Analysis: Influence Maps	241
	Data Structure	242
	Some Useful Tests	243
	Representing Tactics	244
	In Closing	248
Chapter 9	Scripting	249
	Building a Scripting Language	251
	Parsing Simple Languages	251
	Parsing Structured Languages	259
	Embedded Languages	264
	Learning Lua	264
	Java Scripting	272
	Socket-Based Scripting	276
	In Closing	279
Chapter 10	Network Programming	281
	How the Internet Really Works	282
	The Programmer's Perspective: Sockets	284
	Clients	285
	A Minimal TCP Client	286
	A Minimal UDP Client	290
	A Simple TCP Server	293
	Multiclient Servers	296
	Concurrent, Connection-Oriented Servers	296
	Iterative, Connection-Oriented Servers	299

UDP Servers	301
Preventing Socket Blocks	302
Designing Client-Server Games	304
Massively Multiplayer Games	306
Data Extrapolation	306
Hierarchical Messaging	308
Spatial Subdivision	309
Send State Changes Only	310
Working with Server Clusters	312
Dynamic Servers and the Braveheart Syndrome	313
In Closing	315

Part II Engine Programming

Chapter 11	2D Game Programming	317
	On Older Hardware	317
	Data Structures for 2D Games	320
	Sprite-Based Characters	320
	Mapping Matrices	323
	Tile Tables	324
	2D Game Algorithms	326
	Screen-Based Games	326
	Two- and Four-Way Scrollers	327
	Multilayered Engines	330
	Parallax Scrollers	332
	Isometric Engines	334
	Page-Swap Scrollers	336
	Special Effects	338
	Palette Effects	338
	Stippling Effects	343
	Glazing	344
	Fire	345
	In Closing	347
Chapter 12	3D Pipeline Overview	349
	A First Look	350
	Fundamental Data Types	351
	Vertices	351
	Indexed Primitives	352

Color	356
Texture Mapping	358
Geometry Formats	359
A Generic Graphics Pipeline	360
Clipping	361
Culling	368
Occlusion Testing	371
Resolution Determination	373
Transform and Lighting	379
Rasterization	380
In Closing	383
Chapter 13 Indoors Rendering	385
General Analysis	385
Occluder-Based Algorithms	386
Binary Space Partition Algorithms	388
Construction	388
View-Dependent Sorting	398
Hierarchical Clipping	400
Occlusion Detection	401
Rendering	403
Portal Rendering	404
Optical Effects Using Portals	408
Hierarchical Occlusion Maps	410
Hybrid Approaches	412
Portal-Octree Hybrid	412
Quadtree-BSP Hybrid	413
Hardware-Assisted Occlusion Tests	414
In Closing	418
Chapter 14 Outdoors Algorithms	419
Overview	419
Data Structures for Outdoors Rendering	421
Heightfields	421
Quadtrees	423
Binary Triangle Trees	424

Geomipmapping	425
ROAM	429
Pass One: Construct the Variance Tree	429
Pass Two: Mesh Reconstruction	431
Optimizations	434
Chunked LODs	436
A GPU-Centric Approach	440
Outdoors Scene Graphs	443
In Closing	445
Chapter 15 Character Animation	447
Analysis	447
Explicit Versus Implicit Methods	448
Explicit Animation Techniques	450
Frame Animation	450
Keyframe Animation	451
Tagged Interpolation	454
Implicit Animation Overview	460
Forward Kinematics	462
Math of Skeletal Animation	464
Hardware-Assisted Skeletal Animation	467
Prop Handling	470
A Note on Vehicles	472
Limb Slicing	473
Facial Animation	474
Inverse Kinematics	477
Analytic IK	477
Cyclic Coordinate Descent	480
Blending Forward and Inverse Kinematics	482
In Closing	483
Chapter 16 Cinematography	485
First-Person Shooters	486
Handling Inertia	488
Flight Simulators and Quaternions	490
Popular Operations	491
Third-Person Cameras	495

Cinematic Cameras: Camera Styles	500
Cinematic Cameras: Placement Algorithms	506
Selecting the Camera Target	507
Selecting the Relevant Information	508
Selecting View Angles	510
Agent-Based Approaches	512
In Closing	513
Chapter 17 Shading	515
Real-World Illumination	516
A Simple Rendering Equation	517
Per-Vertex and Per-Pixel Lighting	521
Light Mapping	522
Diffuse Light Mapping	523
Specular Light Mapping	523
Global Illumination Using Light Maps	524
Implementing Light Mapping: DirectX	525
Creating Light Maps	527
Storing Light Maps	538
The BRDF	541
Average Vector	547
Shadows	548
Nonphotorealistic Rendering	559
Pencil Rendering	560
Outlined Drawing	561
Stroked Outlines	562
Cel Shading	563
Painterly Rendering	564
In Closing	564
Chapter 18 Texture Mapping	565
Types of Textures	566
Texture Mapping	567
XYZ Mapping	568
Cylindrical Mapping	568
Spherical Mapping	569
Texture Mapping a Triangle	570
Tiling and Decals	571
Filtering	572

Mipmapping	573
Texture Optimization	575
Texture Compression	577
Texture Caching and Paging	578
Multipass Techniques	580
Multitexture	584
Texture Arithmetic and Combination	585
Detail Textures	593
Environment Mapping	594
Bump Mapping	595
Emboss Bump Mapping	596
Dot3 Bump Mapping	597
Gloss Mapping	599
In Closing	600
Chapter 19 Particle Systems	601
Anatomy of a Particle System	602
Local Versus Global Particle Systems	603
The Particle Data Structure	603
A Generic Particle System	605
Spawning Particles	605
Particle Behavior	608
Particle Extinction	612
Rendering Particles	613
Some Notes on Architecture	617
Speed-Up Techniques	619
Avoid Malloc and Free	619
Spatial Indexing	620
LOD Particle Systems	621
Shader-Based Particle Systems	623
In Closing	624
Chapter 20 Organic Rendering	625
Nature and Complexity	626
Trees	627
Billboards	627
Image-Based Methods	630

Parallel IBR Method	630
Orthogonal IBR method	632
Grass	636
Layered Grass	636
Statistical Distribution Algorithms	638
Clouds	640
Skyboxes and Domes	641
Billboarded Clouds	642
Volumetric Clouds	642
Oceans	643
Realistic Ocean Geometry	644
Ocean Appearance	644
Caustics	646
In Closing	650
Chapter 21 Procedural Techniques	651
Procedural Manifesto	652
Renderman	654
Real-Time Shading Languages	658
Current Languages	659
Cg	660
HLSL	660
GL2 Shading Language	660
Types of Shaders	661
A Collection of Shaders	662
Geometry Effects	662
Lighting	664
Texture Mapping	667
Particle Systems	671
Animation	673
Procedural Texturing	676
Special Effects	680
In Closing	682
Chapter 22 Geometrical Algorithms	683
Point Inclusion Tests	683
Point-in-Sphere	684
Point-in-AABB	684
Point-in-Convex Polygon	686

Point-in-Polygon (Convex and Concave): Jordan Curve Theorem	687
Point-in-Convex Object	688
Point-in-Object (Jordan Curve Theorem)	689
Point-in-Object (3DDDA)	689
Ray Intersection Tests	691
Ray-Plane	691
Ray-Triangle	692
Ray-AABB Test	693
Ray-Sphere Test	693
Ray-Convex Hull	695
Ray-General Object (3DDDA)	695
Moving Tests	695
Sphere: Sphere	696
Point Versus Triangle Set Collision (BSP-Based)	699
Mesh Versus Mesh (Sweep and Prune Approach)	699
Computing a Convex Hull	701
2D Solution	701
3D Solution	701
Triangle Reduction	703
Vertex Collapsing	703
Edge Collapsing	704
Progressive Meshes	704
Nonconservative Triangle Reduction	706
In Closing	708

Part III Appendices

Appendix A Performance Tuning	709
Analysis Techniques	709
Timing	710
Memory Footprints	712
Analysis Tools	715
Detecting Bottlenecks	716
General Optimization Techniques	719
Choose Your Enemy	720
Precompute Everything	720
Simplify Your Math	721
Store Data Efficiently	722

Forget Malloc() and Free()	723
Be Linear	724
Watch Out for Pointers	724
Application	725
Efficient Data Transfer	727
Tuning the Geometry Pipeline	731
Tuning the Rasterizer Stage	733
Other Optimization Tools	735
In Closing	735
Appendix B OpenGL	737
Philosophy	737
Basic Syntax	738
Immediate Mode Rendering	741
Transformations	744
Concatenation of Transforms	747
Hierarchical Transforms	748
Camera Model	749
Lighting	752
Texturing	757
Working in RGBA Mode	763
Display Lists	765
Vertex Arrays	767
Using Regular Vertex Arrays	769
Compiled Vertex Arrays	771
Server-Side Vertex Arrays	771
Vertex Array Range	772
Vertex Array Object	772
Vertex Buffer Object	773
OpenGL Extensions	774
Efficiency Considerations	775
Geometric Representation	775
Geometry Rendering	776
Avoid Unneeded State Changes	777
Discard Early	777
In Closing	778

Appendix C	Direct3D	779
	History	779
	Booting Direct3D	781
	Handling Geometry	785
	Indexed Primitives	787
	User Pointer Primitives	788
	Efficient Geometry Delivery	789
	Flexible Vertex Formats	790
	Matrices, Cameras, and Transforms	792
	Working with Texture Maps	794
	Lighting	795
	Render States	799
	The Extension Library	799
	ID3DXMesh	799
	ID3DXPMesh	800
	ID3DXFont	800
	Animation Helpers	801
	In Closing	802
Appendix D	Some Math Involved	803
	Distances	803
	Distance Between Two Points	803
	Distance Between Two Lines	804
	Distance from a Point to a Line	805
	Distance from a Point to a Plane	805
	Distance Between Two Planes	805
	Trigonometry	806
	Vector Math	807
	Modulo	807
	Dot Product	807
	Cross Product	807
	Matrices	808
	Matrix Addition	808
	Matrix Transposition	809
	Matrix-Matrix Multiplication	809
	Determinant of a Matrix	809
	Inverse of a Matrix	810

Matrices for Geometry	811
Translation	811
Scaling	812
Rotation	812
Basis Matrices	813
Concatenation of Transforms	816
Appendix E Further Reading	817
Chapter 1: Chronology of Game Programming	817
Chapter 2: Game Architecture	817
Chapter 3: Data Structures and Algorithms	818
Chapter 4: Design Patterns	818
Chapter 5: User Input	818
Chapters 6, 7, and 8: Fundamental AI Technologies, Action-Oriented AI, and Tactical AI	818
Chapter 9: Scripting	819
Chapter 10: Network Programming	820
Chapter 11: 2D Programming	820
Chapter 12: 3D Pipeline Overview	820
Chapter 13: Indoors Rendering	821
Chapter 14: Outdoors Algorithms	821
Chapter 15: Character Animation	822
Chapter 16: Cinematography	822
Chapter 17: Shading	822
Chapter 18: Texture Mapping	823
Chapter 19: Particle Systems	823
Chapter 20: Organic Rendering	823
Chapter 21: Procedural Techniques	823
Chapter 22: Geometrical Algorithms	824
Appendix A: Performance Tuning	824
Appendix B: OpenGL	825
Appendix C: Direct3D	825
Appendix D: Some Math Involved	825
Index	827
